ANDRÉS GARCÍA MONTOYA

Roles: CTO & AI PM | **Location:** Open worldwide | **Availability:** Immediate start

With a with over 18 years of experience leading globally distributed engineering teams and building scalable technology products. In recent years, I have focused on developing LLM-powered and agent-based systems in production, leveraging RAG pipelines, real-time agents, and modular, cloud-based architectures. My approach centers on experimentation, abstraction, and strong feedback loops to manage the probabilistic nature of AI systems, while ensuring reliability, scalability, and continuous improvement. I also prioritize platform thinking, observability, and AI-assisted development practices to enable teams to move faster and deliver consistent value. This combination of **hands-on technical depth** and **leadership** experience positions me to effectively lead engineering teams focused on building and scaling generative AI platforms.

AI SKILLS

- ✓ **Machine Learning:** Supervised Machine Learning: Regression and Classification., Advanced Learning Algorithms, Unsupervised Learning, Recommenders, Reinforcement Learning
- ✓ **Backend & Platform:** PHP, TypeScript, NextJS, Python and Streamlit
- ✓ **Cloud & Infrastructure:** AWS EKS, AWS Lambda, AWS Bedrock
- ✓ **Search & Retrieval:** Chunking + pgvector, AWS OpenSearch Serverless
- ✓ **Document & Data Processing:**), AWS Textract, , PostgreSQL, DynamoDB, S3
- ✓ **Observability:** Datadog, LangFuse, LangSmith
- ✓ **AI-assisted development tools:** Replit , GitHub Copilot, Claude, Lovable.
- ✓ **Developer Tooling:** GitHub, GitHub Actions.
- ✓ **Collaboration:** Asana, Jira, Confluence, Microsoft Teams, Outlook
- ✓ **Low Latency:** LiveKit
- ✓ **STT:** Deepgram , **TTS:** Cartesia
- ✓ **BI:** Snowflake, Tableau, PowerBI
- ✓ **Data Science:** Jupyter Notebooks, NumPy, Pandas, Matplotlib, Seaborn, Plotly, Scikit-Learn, TensorFlow

ANDRÉS GARCÍA MONTOYA

Roles: CTO & AI PM | **Location:** Open worldwide | **Availability:** Immediate start

PM SKILLS

- ✓ Grounded in values, with empathy and a strong ethical compass
- ✓ Agile Project Management (SCRUM)
- ✓ Customer Relationship Management
- ✓ Project Planning and Execution
- ✓ End-to-End Project Management
- ✓ Ownership and Accountability
- ✓ Cross-Functional Collaboration
- ✓ Risk Management
- ✓ Progress Tracking and Reporting
- ✓ Quality Assurance
- ✓ Communication Skills
- ✓ Organizational Skills
- ✓ Problem-Solving and Analytical Skills
- ✓ Self-Starter Mentality
- ✓ Proficiency in Project Management Tools

Experience

bioanywhere

Bioanywhere Inc (Bogotá, Colombia, 2024-2026)
https://bioanywhere.com

I independently designed and built **Bioanywhere**, taking a deeply **hands-on leadership approach** across the full stack — from defining the architecture to implementing core components and guiding technical direction. It is an AI voice agent platform that combines real-time communication, LLM orchestration, and scalable cloud infrastructure. The platform is built with **Next.js (React + TypeScript)** on the frontend and a **PostgreSQL + pgvector** backend, using type-safe data access with Drizzle ORM. Real-time voice interactions are powered by **LiveKit (WebRTC)**, which connects to a custom **Python-based voice agent** leveraging the LiveKit Agents framework. This agent integrates **Deepgram (speech-to-text), GPT-4–class models for reasoning, and Cartesia for multilingual text-to-speech**, supporting over 40 languages. The system follows a **multi-tenant, white-label architecture**, where each agent has its own configuration, branding, and knowledge base. Contextual intelligence is enabled through a **RAG pipeline** (LlamaIndex + embeddings + pgvector), allowing agents to retrieve and use domain-specific knowledge in real time.
For extensibility, I designed and implemented a **dual-path tool execution layer**, integrating thousands of third-party applications via Composio, as well as custom MCP servers deployed on **Google Cloud Run** using Docker and CI/CD pipelines.
From a leadership perspective, I combined **hands-on development with team enablement**, setting architectural standards, making key design decisions, and ensuring the system remained modular and adaptable as models and requirements evolved.
The platform also includes **secure authentication (OTP, JWT), event streaming analytics, and SIP telephony integration**, enabling both web-based and phone-based interactions.
Overall, this work reflects my approach as a **hands-on leader** — building critical components directly while creating the structure, standards, and direction that allow teams to scale and deliver reliably.

Experience

LEGADO

Legado (Bogotá, Colombia, 2024-2025)
https://legado.green/

As CTO, I led the technology strategy and execution of a global sustainability platform focused on creating positive environmental and social impact through technology. I led the evolution of the platform architecture, coordinated multidisciplinary engineering teams and international contractors, and served as the primary technical liaison with global partners, including Deloitte and other specialized consulting firms. I also led the ecosystem's tokenization strategy, evaluating blockchain architectures, optimizing smart contract implementations on the Polygon network, and reducing operational costs through more efficient technical solutions.

My responsibilities included solving complex technical challenges, designing software architecture, validating prototypes, assessing technical feasibility, and ensuring alignment between business objectives, sustainability goals, and technology execution.

My leadership covered product strategy, software architecture, blockchain integration, cloud infrastructure, AI-powered features, and sustainability-driven innovation. Working closely with teams across multiple countries and disciplines, I helped transform high-level concepts into scalable digital products capable of supporting environmental initiatives, personal transformation programs, and technology-for-social-good solutions.

SDG Investors (Miami, FL, 2020 – 2024)
https://sdgtalks.ai

Software Development Manager, AI News Platform

I led the development of an AI-driven news platform that automatically ingests and processes global content at scale. The system continuously **scrapes news from multiple online sources** and applies **LLM-based pipelines in real time** to analyze, contextualize, and rewrite articles aligned with the **United Nations Sustainable Development Goals (SDGs)**.
The platform delivers personalized, mission-driven content to **thousands of users across universities in the United States**, enabling students and institutions to engage with global issues through an AI-curated lens.
From a technical perspective, I designed and implemented the core architecture, including **LLM-powered content generation, NLP pipelines, and scalable backend systems** using Python, PHP, MySQL, and AWS. I also led the integration of AI chat capabilities, enabling interactive exploration of SDG-related topics.
This work combined **real-time data ingestion, generative AI, and social impact**, creating a scalable platform that transforms raw news into structured, purpose-driven insights.

Social Impact Movement (Miami, FL, 2018 – 2024)

AI Software Developer Manager

I led technology initiatives focused on AI-driven innovation, overseeing the design and delivery of scalable software solutions while maintaining and optimizing AWS cloud infrastructure.
As part of this work, I **designed and implemented AI voice agents using ElevenLabs**, enabling natural, multilingual interactions for social impact use cases. These agents were integrated into broader AI systems to support user engagement, content delivery, and conversational experiences.
I combined **hands-on development with team leadership**, guiding architecture decisions, driving innovation across projects, and ensuring reliable, scalable deployments in the cloud.

Previous Experience

mindtalks.ai (Miami, FL, 2017 – 2020)

Founder and CTO: I created a patented surveying system that reached over 50 million people in 10 countries. I coded the technology in JavaScript and expanded it across LATAM with a team of 7.

Forward (Bogotá, Colombia, 2007 – 2017)

Founder and Project Manager: Over 10 years, I successfully managed numerous technology projects in various industries, including banking and small companies.

Grupo SURA (Medellín, Colombia, 2011-2013)

Project Manager & OPM3 Strategy Advisor: I designed and executed OPM3® assessments for Suramericana S.A., providing detailed insights into project, program, and portfolio management capabilities. I also conducted IT assessments for project management, offering technological insights to enhance organizational processes.

Mayor's Office of Bogotá (Bogotá, Colombia, 2009-2011)

Process Expert: I designed and automated virtual procedures for the Bogota city hall administration, focusing on improving efficiency and effectiveness. This involved modeling and automating various business processes to facilitate citizen paperwork online.

Ministry of Foreign Affairs of Colombia (Bogotá, DC., 2007 – 2008)

Senior Analyst: I led the TIR project, which aimed to enhance services through the adoption of new technologies, particularly focusing on virtual work with consulates.

Financial Superintendence of Colombia (Bogotá, D.C, 2007- 2008)

Project Manager: I contributed to the development of a unified registration and information system for the newly formed Financial Superintendence of Colombia, following the merger of the former Stock Superintendence and Bank Superintendence. This project aimed to ensure public trust, financial system stability, market integrity, and the protection of financial consumer rights.

Recognitions

2020 **Co-founder** at SDG Investors

2019 **O1 VISA** Individuals with Extraordinary Ability, **US Department of Homeland Security**

2018 **Patent**, mindtalks.ai
